

NCC VOLUME TWO ENERGY EFFICIENCY

Read Me!

Welcome to the National Construction Code (NCC) Resource Kits. This kit provides educational resources which can be used by teaching professions, industry association trainers, or employers to provide an introduction and overview of the Energy Efficiency Provisions in Volume Two of the NCC.

This kit can be read/delivered as a standalone resource, but we recommend that you have access to the NCC (online or hardcopy) as you go through.

The NCC is free online – just visit www.abcb.gov.au and register to gain access.

This kit contains different components including FAQs, Case Studies and Group Exercises, that can be tailored to the needs of the tertiary institution or organisation that is delivering it. Teaching professions using the resources as presentations to TAFE and university students may wish to show all of the slides in the main PowerPoint presentation to the class. Industry association trainers that are familiar with the NCC however, may prefer to use the 'hide' function of PowerPoint and simply present the slides of relevance or particular interest. Others may wish to only show certain topics which can be found on the table of contents within the first few slides of the presentation. The choice is yours!

For example, an introductory level presentation may choose to focus on just a few of the topics as recommended below:

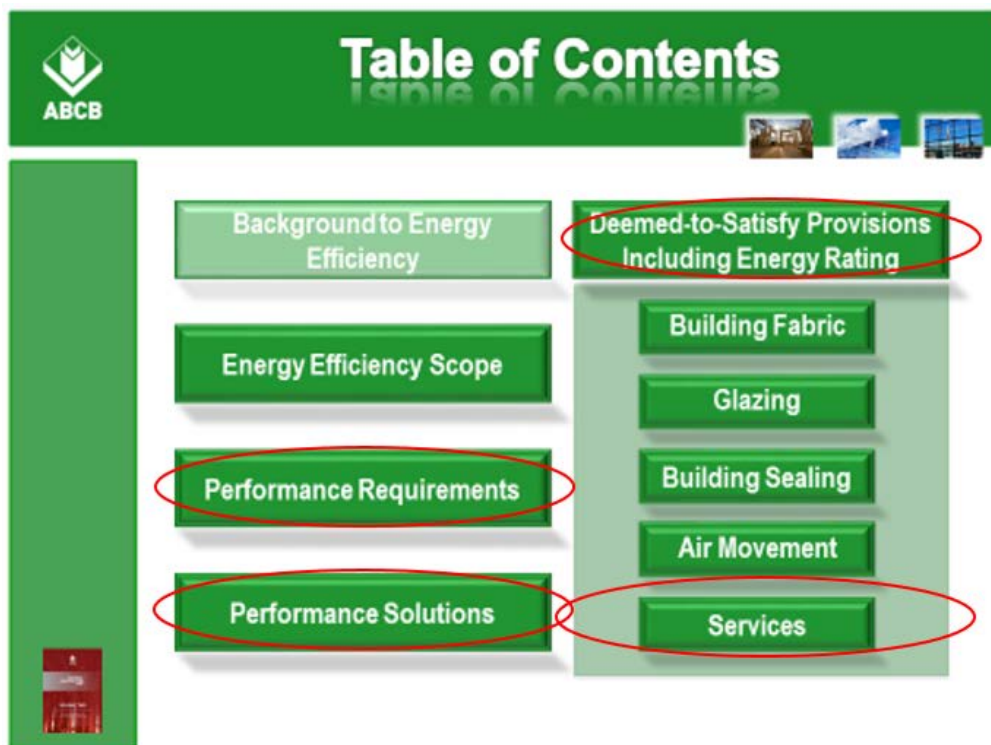

Table of Contents	
Background to Energy Efficiency	Deemed-to-Satisfy Provisions Including Energy Rating
Energy Efficiency Scope	Building Fabric
Performance Requirements	Glazing
Performance Solutions	Building Sealing
	Air Movement
	Services
